

Automate run PowerShell

The screenshot displays the Power Automate interface for a PowerShell Script. The main workspace shows a workflow with two actions:

- Set variable:** Assign to variable `FilePath` the value `'C:\inetpub\wwwroot\ThirdScheduleAPI'`.
- Run application:** Run application `FilePath` `'\env\Scripts\python.exe'` with arguments `'-m uvicorn app:app --host 127.0.0.1 --port 5000'` and store its process ID into `AppProcessId`.

The **Variables** pane on the right shows the current state of the workflow:

- Input:** 0
- Output:** 0
- Flow:** 2
 - `AppProcessId`: 17768
 - `FilePath`: C:\inetpub\wwwro...

A terminal window at the bottom shows the output of the Python application:

```
C:\inetpub\wwwroot\ThirdScheduleAPI\env\Scripts\python.exe
←[32mINFO←[0m: Started server process [←[36m14092←[0m]
←[32mINFO←[0m: Waiting for application startup.
←[32mINFO←[0m: Application startup complete.
←[32mINFO←[0m: Uvicorn running on ←[1mhttp://127.0.0.1:5000←[0m (Press CTRL+C to quit)
←[32mINFO←[0m: 127.0.0.1:51662 - "←[1mGET /docs HTTP/1.1←[0m" ←[32m200 OK←[0m
←[32mINFO←[0m: 127.0.0.1:51662 - "←[1mGET /openapi.json HTTP/1.1←[0m" ←[32m200 OK←[0m
←[32mINFO←[0m: 127.0.0.1:51663 - "←[1mGET /docs HTTP/1.1←[0m" ←[32m200 OK←[0m
←[32mINFO←[0m: 127.0.0.1:51663 - "←[1mGET /openapi.json HTTP/1.1←[0m" ←[32m200 OK←[0m
```

The status bar at the bottom indicates: **Status: Ready**.
